

CSCI 1101 – 2017

Laboratory Report 8

Your task is to complete the assigned work using JGrasp or an IDE of your choosing. You may use your own computer, or one of the lab computers provided.

Your submission should be a **ZIP** file containing your source code files. You should submit your **ZIP file** on Brightspace:

<http://dal.brightspace.com>

Submission Deadlines (firm):

Monday Labs: due Wednesday by 12:00pm (noon)

Friday Labs: due Sunday by 12:00pm (noon)

NB:

- Try to submit this report *during* the lab so that your TA can check it for you before you submit!
- Attendance is mandatory in all labs, and will form part (10%) of your overall lab grade
- Acknowledge any help that you obtained from friends, TAs, the Learning Centre, etc., by adding comments to your code where appropriate. **Obtaining help is fine, so long as you acknowledge it!**
- Any students who cannot log on to the lab computers should speak to the Help Desk to set up their account.
- Textbooks, class handouts, and any other materials are welcomed and encouraged in all labs!
- Food and drink are not permitted in the computer labs
- **Late labs are *not* accepted!** It is known that computer errors, power outages, and network lag are 105% more likely to occur between 11:55-11:59am, in the moment they can do the most damage. Account for this, and give yourself the chance to make a timely submission!

Header Comments

Your code should now include header comments for all of your class (.java) files. The comment should include the lab/assignment number, the course (CSCI 1101), the name of your program and a short description of the entire class, the date, your name and Banner ID, and a declaration that matches the first page of this document (e.g., whether you received help). See the example below for what a header comment should include:

```
/*Lab1, Question 1 CSCI 1101
   Student.java holds information about a student at Dalhousie in CSCI1101 and
   their grades
   June 29, 2015
   John Smith B00112345
   This is entirely my own work. */

public class Student {
//rest of Code
```

If applicable, your demo class should then also have a similar header:

```
/*Lab1, Question 1 - demo class CSCI 1101
   StudentDemo.java is a demo program for the Student class. It creates student
   objects, and compares different students.
   June 29, 2015
   John Smith B00112345
   I received help with creating Student objects from my TA but the rest is my
   own work. */

public class StudentDemo {
//rest of Code
```

Exercise 1

For this exercise, you will write two methods for **LinkedList class**. You need to download Node.java, LinkedList.java. These were discussed in the lectures. You will add these two methods to the LinkedList class and then create a demo program and to test these two methods.

- a) Write a method called countWord. It takes in a String returns the number of times the String is contained in the LinkedList.

```
public int countWord (String word)
```

- b) Write a method called lastIndexOf. It takes in a String and returns the index of the last occurrence in the list (assume the first element (front) is at index 0). It returns -1 if the item is not in the list.

```
public int lastIndexOf (String word)
```

- c) Write a method called remove which takes in a String as a parameter that removes every occurrence in the LinkedList (note, this is a void method).

```
public void remove (String word)
```
